Scrappia quick guide

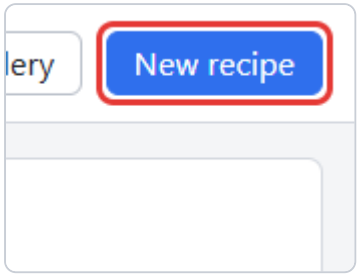

Get product names and prices from an Amazon search, page after page, into an Excel file. About 10 minutes. No technical knowledge needed.

How this works: Scrappia opens two windows. The **Scrappia window** has the buttons. The **browser window** shows Amazon. Whenever a button is highlighted **in red** in a picture below, that is the thing to click.

- When a **Pick** button is on, clicking in the browser window *captures* what you click instead of opening it.
- Press `Esc` in the browser window (or click `Off`) to browse normally again.

1 Start a new recipe

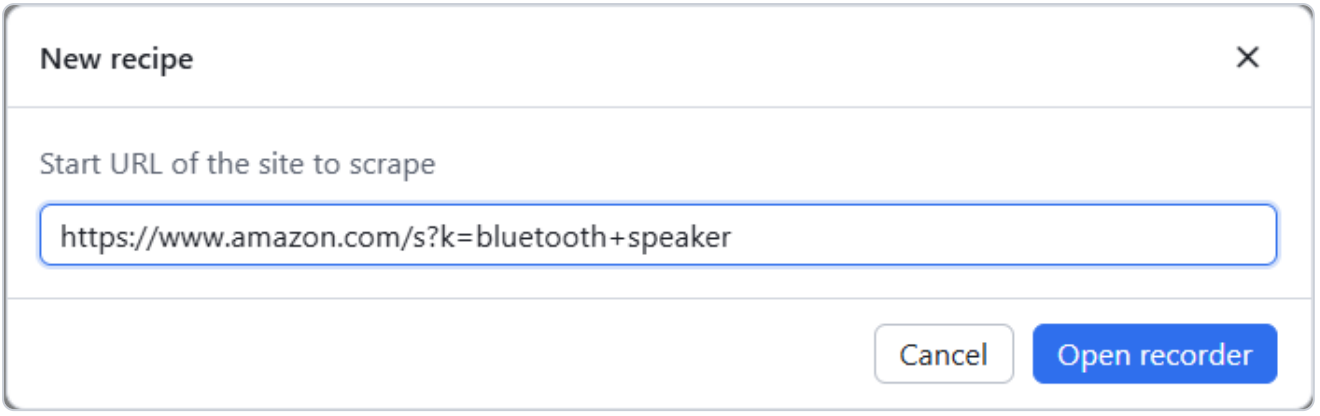

Open Scrappia. On the Home screen click `New recipe`.

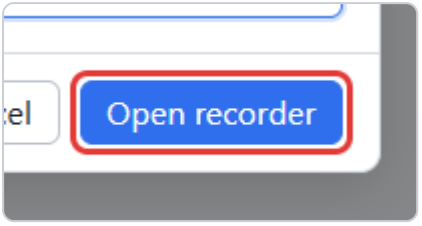

The New recipe button on the Home screen

2 Paste the Amazon search address

In your normal browser, search Amazon for what you want (for example "wireless headphones"). Copy the address from the top of the browser. Paste it into the box and click **Open recorder**.

Paste the search address here

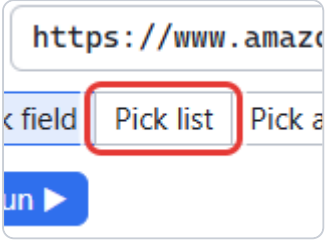

Then click Open recorder

> A second window opens with Amazon inside it. Wait until the products are visible. If Amazon asks you to type some characters, do that in the second window first.

3 Switch on "Pick list"

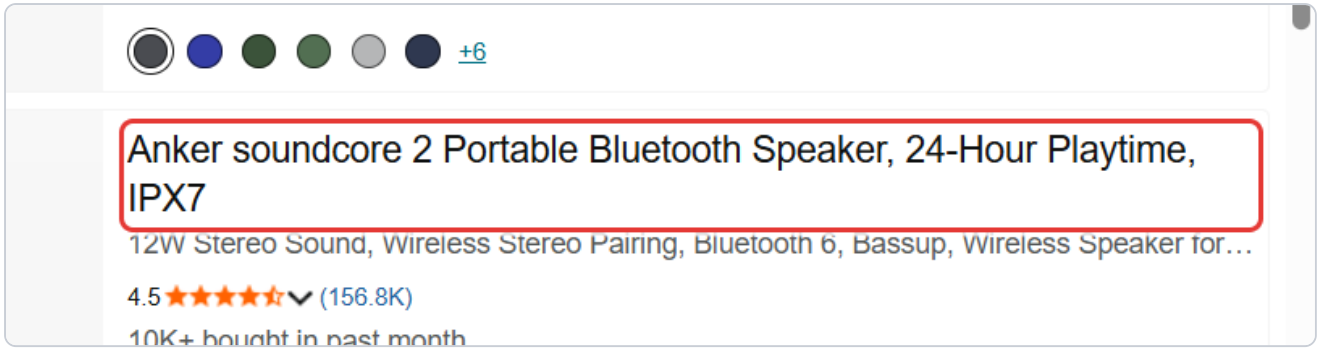

In the Scrappia window click **Pick list** at the top. From now on, clicks inside the Amazon window are captured.

Pick list, in the top bar of the Scrappia window

4 Click one product name in the Amazon window

Click the **name** of any product in the results. Scrappia looks at that product, finds all the others that look the same, and lists what it can read from them.

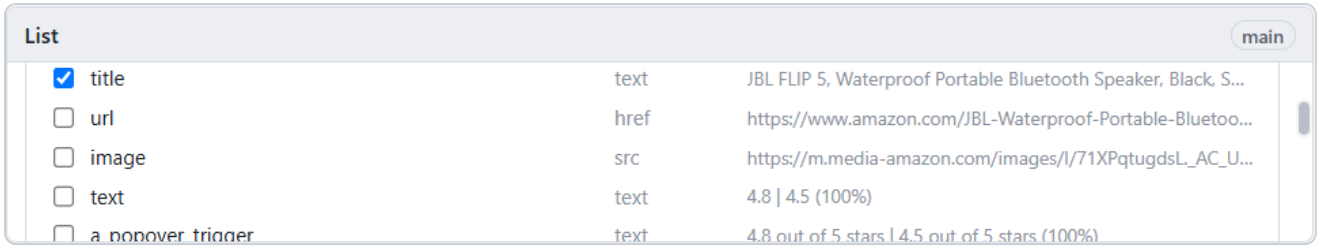

Click a product name (any one will do)

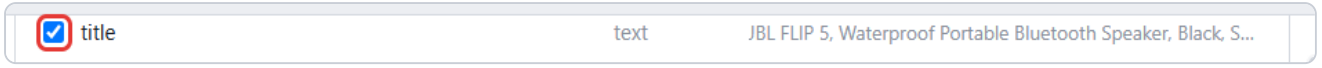

> If the wrong thing gets highlighted (for example the whole page), click Off, then Pick list again and click a different part of a product, such as its price.

5 Keep only name and price, then use the list

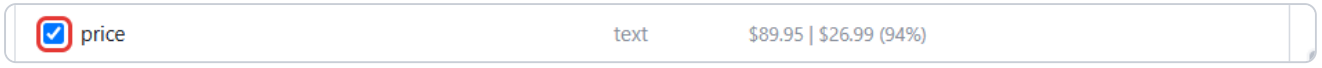

The panel on the right now says how many products were found (here: **16 records**) and shows everything Scrappia can read from them. Tick **title** and **price**, untick the rest, and click the blue button **Use this list with 2 field(s)** at the bottom of the panel.

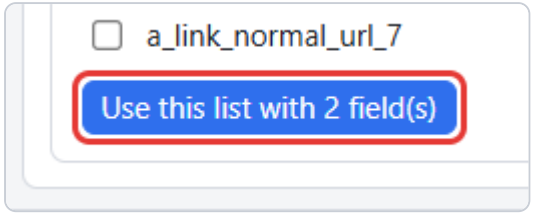

The fields Scrappia found (scroll the panel to see them all)

Keep "title" ticked

Keep "price" ticked, untick everything else

Then click the blue button at the bottom of the panel

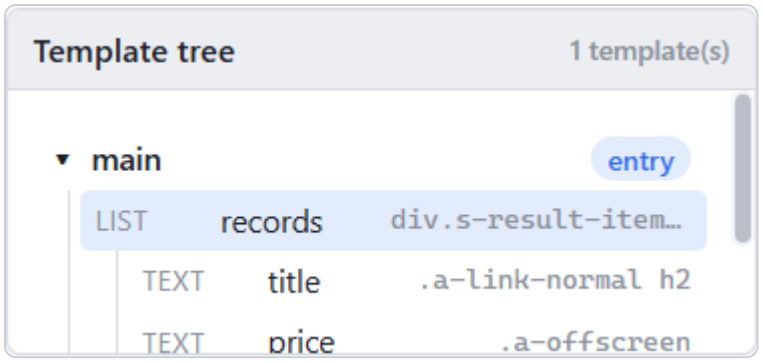

6 Check the preview

The bottom of the Scrappia window now shows one row per product with its name and price. The left side shows your recipe: a list with two fields.

Data preview | Current page (16) | Test run | list candidate #1, 16 records | Refresh | Test run (5 pages)

#	title cand #1 · 16 hit(s)	price cand #1 · 33 hit(s) · 1 empty
1	JBL FLIP 5, Waterproof Portable Bluetooth Speaker, Black, Small	$89.95
2	Bluetooth Speaker, 20W HD Sound, Portable Wireless, IPX5 Waterproof, Up to 24H Playtime, TWS Pairing, for Home/Party/Ou...	$26.99
3	Anker soundcore 2 Portable Bluetooth Speaker, 24-Hour Playtime, IPX7	$44.99
4	JBL Charge 6 Portable Bluetooth Speaker, Waterproof, Drop-Proof - Black	
5	Anker soundcore 2 Portable Bluetooth Speaker, 24-Hour Playtime, IPX7	$33.99
6	Soundcore Boom 2 by Anker, 80W Outdoor Bluetooth Speaker, 24H Playtime	$89.98
7	Portable Bluetooth Speaker Gift Ideas: Outdoor Travel Essentials Waterproof	$19.99

Data preview: one row per product

Your recipe so far

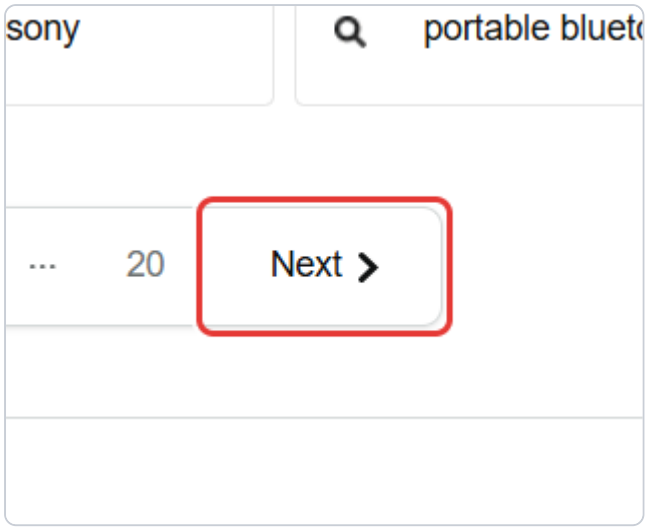

> A few rows may have no price. That is normal: Amazon shows some results (sponsored items, bundles) in a different layout.

7 Switch to "Pick field" and click the Next button

Click **Pick field** in the Scrappia window. Then scroll to the bottom of the Amazon window and click the **Next** button of the page numbers.

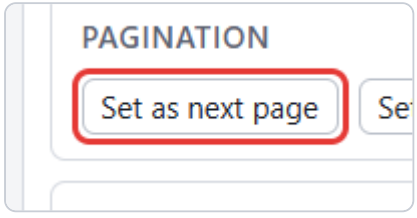

Pick field, in the top bar

Click Next at the bottom of the Amazon page

8 Tell Scrappia this is the "next page" button

In the panel on the right click **Set as next page**. Scrappia will now move through the pages on its own.

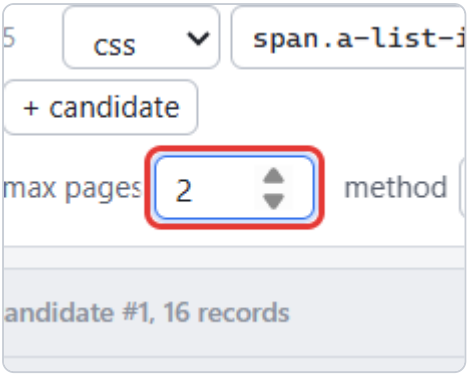

Set as next page

> If a site has a "Load more" button instead of page numbers, click that button in step 7 and choose **Set as load more** here instead. For pages that load more products as you scroll, choose **Infinite scroll**.

9 Choose how many pages (optional)

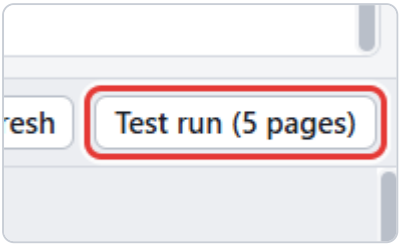

In the recipe on the left, click **Pagination**. In **Max pages** type how many pages you want, for example **2**. Leave it empty or -1 for all pages.

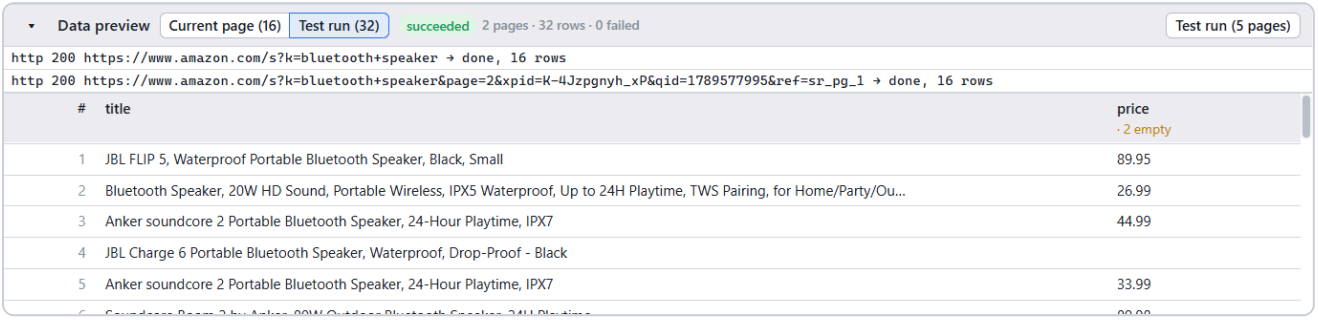

Max pages set to 2

10 Try it: "Test run (5 pages)"

Click **Test run (5 pages)** at the bottom. Rows arrive while it runs. When the status says **succeeded** you should see products from more than one page. In this example: **2 pages · 32 rows · 0 failed**.

Test run button

The result: status, pages, rows and a short log

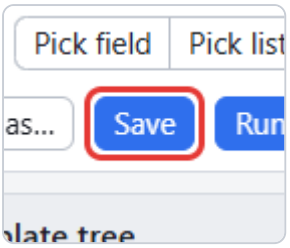

> If it says 0 rows, read the grey log lines under the status: they say what happened (for example "the site refused the request"). Scrappia switches to its browser automatically when Amazon refuses a plain request.

11 Give it a name and save

Type a name in the name box at the top, then click **Save**.

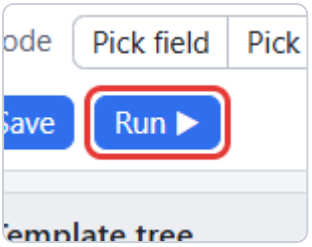

Name box

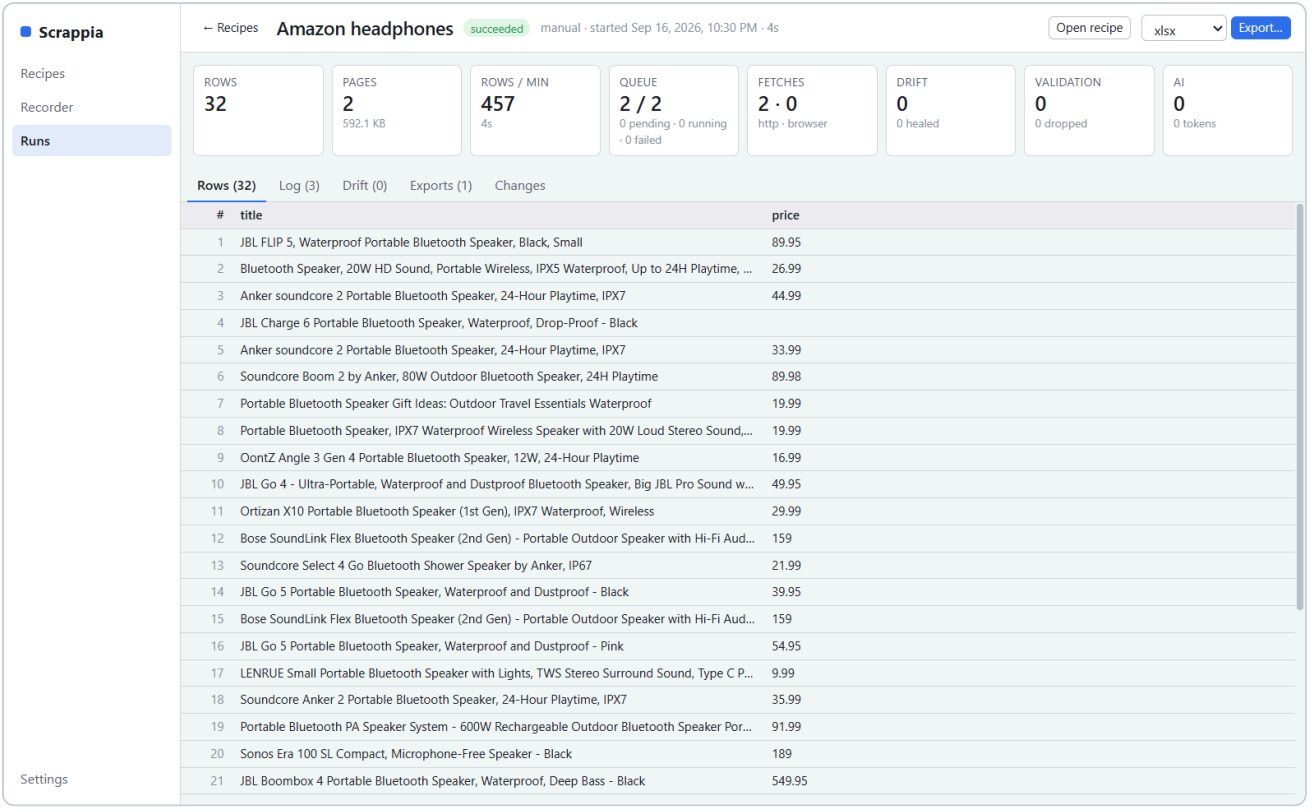

Save

12 Run it for real

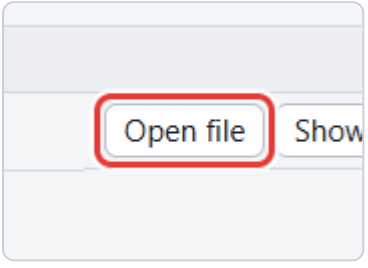

Click **Run**. The Run monitor shows the progress. When it says **succeeded**, open the **Exports** tab and click **Open file** to open the Excel file. (If you did not choose an output, Scrappia writes an Excel file for you.) In this example the run collected **32** rows from **2** pages.

Run

The Run monitor after the run

Exports tab: open the file

Next time

Your recipe is on the Home screen. Click `Run` next to it whenever you want fresh data, or open it and add a **Schedule** (gear button, Schedule tab) to run it every day. Excel is the default export; the gear button's **Outputs** tab adds CSV, Google Sheets, a database and more.

If something goes wrong

Amazon shows a puzzle ("type the characters"): solve it in the Amazon window; the run continues by itself.
Only one page was scraped: click Pagination on the left and check the selector. It should be something short like `a.s-pagination-next`, not a long text containing "page 2". Replace it if needed and test again.
Prices look wrong: click the price field on the left, and under Transforms add **currency**. It turns "$29.99" into the number 29.99.
Want to type your own search words? Gear button, General tab: add a keyword list and put `{{keyword}}` in the address.

Pictures taken automatically from Scrappia on 2026-09-16 using https://www.amazon.com/s?k=bluetooth+speaker. Amazon changes its pages often; the buttons in Scrappia stay the same.
